- No need to change the platinum-catalyzed glass fiber burner

Package

Box 1set, S-BOSTON one touch warmer 1EA, Cloth pouch 1EA, Little oil filler cup 1EA, Manual

Specification

01 Point _ On/Off

Hard to turn on and off?! Come on, It's 21th century...

Easy lighting and extinguishing

02 Point _ Quick lighting

Too long time for ignition, It takes about 15sec for ignition in fact, however sometimes it doesn't get ignited.

No need of lighter. Press ignition button for 5 seconds then it starts working. The heat generator doesn't produce a flame. Totally safe and clean.

03 Point _ No more of additional cost

need extra cost for the glass fiber burner? The glass fiber burner is easily damaged. You have to touch the glass fiber burner to fill the oil and to light. Moreover, the case of burner is sooted whenever you use lighter. Unfortunately the glass fiber burner costs about \$7 each.

The burner is built-in permanently because you don't have to touch it. It is electrical ignition, of course there is no soot.

04 Point _ Economical mechanism

Must use the oil to the end? Conventional hand warmer is hardly turned off. So, You are not able to turn it off.

You can easily turn on and off whenever you want. It is very economical, since the oil tank is blocked when it is turned off.

05 Point _ Extra warmth

electrical hand warmer... is it really warm?? It is not warm and has short running time although it takes too long time to charge.

S-BOSTON will give you hot and toasty day for 25~30 hours. It really works!!!
